

# Accelerate Healing With Shockwave Therapy

There are no side effects with this non surgical treatment and it is available at a reasonable cost. Shockwave treatments are non invasive and promote accelerated recovery of injured soft tissue, bone, heel and joint pain.

A shockwave is an intense, but very short energy wave traveling faster than the speed of sound. The basic technology involved with extracorporeal shockwave technology has been used for decades on millions of people.

Therapy sessions are short, usually 20 – 30 minutes in length, and provide successful relief of chronic pain and restore mobility painlessly. Permanent relief typically begins about 72 hours following treatment.

## 75%-95% Success Rate

### Conditions That Can Be Treated By Shockwave Therapy

- Plantar Fasciitis
- Achilles Tendinopathy
- Scar Tissue Treatment
- Tennis Elbow
- Jumpers Knee
- Calcific Rotator Cuff Tendinitis
